MICAELA JARA

QA ENGINEER · MANUAL, API & AUTOMATION TESTING

Buenos Aires, Argentina · micaaelajara@gmail.com · linkedin.com/in/micaela-jara · github.com/micaelajara

SUMMARY

QA Engineer with 4+ years of experience testing web platforms for US enterprise clients, working remotely in English. Most of my work has been manual, exploratory and API testing, and in the last year I have been building automated suites with Playwright and using Claude Code to write and maintain tests faster. What I enjoy most is finding the bug nobody saw coming and explaining it clearly enough that the team understands why it matters. In October 2026 I start the TestingAI program at Academia QA, where I earned a full scholarship.

EXPERIENCE

Freelance QA Tester, Óptica Global

B2B eyewear ecommerce (Medusa JS) · Remote · 2025 - Present

- Owned QA for the platform from the first test plan to its launch in production: 111 test cases, 23 bugs reported, 21 confirmed by the dev team, 1 of them critical.
- Caught a referral discount no new customer could ever use: each screen worked, but the chain between them didn't.
- Built a Playwright suite in JavaScript, including API access control tests for admin endpoints based on the OWASP API Security Top 10 (BFLA). The suite is public on GitHub: optica-global-playwright-tests.
- Use Claude Code to write test scripts and keep the regression suite up to date as the store changes.

QA Engineer, RebelMouse

SaaS B2B CMS platform · Remote · Mar 2022 - May 2026

- Ran manual and regression testing on releases for enterprise client sites, as part of a distributed team.
- Found a critical bug in the reservation flow for Penske Truck Leasing, the feature their revenue depends on. I followed the network requests to a faulty API endpoint and escalated it with the business impact; it was fixed within hours.
- Used Postman and Chrome DevTools to locate failing endpoints and integration issues, so tickets reached developers with the cause, not only the symptom.
- Wrote Python scripts to check SEO implementation across pages.
- Prioritized bugs by severity and business impact, which helped enterprise clients get fixes sooner.
- Went beyond the written test cases with exploratory testing on complex flows and found edge cases they had missed.

PROJECTS

- **CI/CD practice pipeline:** Jenkins pipeline with Docker test environments to practice a full automated testing workflow outside client work.

EDUCATION AND TRAINING

TestingAI: Autonomous Agents and Data Analysis for QA · Academia QA · Full scholarship · Oct 2026 - Nov 2026

AWS Cloud Practitioner and AI Practitioner · Women in Tech · In progress

Cybersecurity and Privacy · Microsoft, via Coursera · In progress

Arts and Cultural Management · UNTREF · Feb 2025 - Present

Courses: API Testing with Postman (Udemy) · Test Automation with Python and Java (Digital House) · QA Testing (TranSistemas) · JavaScript (Mediapila) · Agile and Scrum · UX/UI Fundamentals

SKILLS

Testing: manual testing, exploratory testing, regression testing, API testing, test planning, test case design, bug reporting, UX/UI validation, OWASP API Security Top 10

Automation and tools: Playwright, JavaScript, Python, Java, Postman, Chrome DevTools, Jenkins, Docker, SQL, AWS, Git, GitHub

AI: Claude Code, AI agents, MCP

Work: Jira, Azure DevOps, Figma, Agile/Scrum, backlog prioritization, user stories, stakeholder communication

Languages: Spanish (native), English (C1, advanced)
