COURSES

API Testing with Postman
(Udemy) · Test Automation with
Python & Java (Digital House) ·
Agile & Scrum · UX/UI
Fundamentals · JavaScript
(Mediapila)

QA Engineer with 4+ years in manual testing, API validation and test automation. I build and maintain Playwright suites, including access-control tests based on the OWASP API Security Top 10, and I use Claude Code to write tests faster and keep regression suites current. I debug through network analysis and pair automated coverage with manual and exploratory testing.

EXPERIENCE

Freelance QA Tester

2025 - present

Óptica Global · opticaglobal.store · Remote

End-to-end QA for a B2B wholesale eyewear ecommerce platform (Medusa JS), from test planning through reporting. Now live in production.

111 case test plan 23 bugs documented 2 critical issues

- Playwright suite in JavaScript, including API-level access control tests based on the OWASP API Security Top 10 (BFLA) on admin endpoints.
- Claude Code used to write test scripts faster and keep the regression suite current.
- Critical find: a cart discount that disappeared at order completion.
- ★ Public test suite: optica-global-playwright-tests

QA Engineer

Mar 2022 - May 2026

RebelMouse · Remote

- End-to-end manual and regression testing across enterprise client deployments in a distributed team.
- API testing and network analysis (Postman, DevTools) to identify faulty endpoints and integration issues.
- Python used to test and validate SEO implementation across pages.
- Bugs prioritized by severity and business impact, reducing resolution time for enterprise clients.
- Exploratory testing across complex flows, finding edge cases the formal test cases missed.

FEATURED CASE: PENSKE TRUCK LEASING

Found a critical bug in the reservation flow, the core revenue feature. I traced the network requests to a faulty API endpoint and escalated it with the business impact. Fixed within hours, restoring the main rental flow.

SELF-DIRECTED PRACTICE

- CI/CD pipeline with Jenkins and Docker-containerized test environments, used to practice full automated testing workflows outside client work.
- Hands-on with the AWS CLI and MCP server while studying for the Cloud Practitioner and AI Practitioner certifications.
