- › AWS AI Practitioner — Women in Tech · In progress
- › API Testing with Postman — Udemy
- › Agile & Scrum Fundamentals
- › UX/UI Fundamentals
- › Intro to Test Automation — Digital House
- › JavaScript — Mediapila

PROFESSIONAL PROFILE

QA Engineer with **4+ years of experience** in manual testing, API validation, and user flow analysis across digital products. Specialized in identifying critical issues, debugging complex scenarios through network analysis, and ensuring high-quality releases. I collaborate closely with product and engineering teams to improve user experience and system reliability.

EXPERIENCE

Freelance QA Tester · **Óptica Global** (opticaglobal.store) · Remote
2025 — Present

- Owned end-to-end QA for a **B2B wholesale eyewear ecommerce (Medusa JS)**, now live in production — from test planning through reporting.
- Designed and executed a **111-case end-to-end test plan** covering checkout, payments, accounts, SEO, and API.
- Built a **Playwright regression suite**, including API-level access control tests aligned with the **OWASP API Security Top 10** (Broken Function Level Authorization) on Admin endpoints.
- Found and documented **23 bugs** with real evidence, including 2 critical ones (e.g., a cart discount silently dropped at order completion).

★ Public test suite

github.com/micaelajara/optica-global-playwright-tests

QA Engineer · **RebelMouse**

Mar 2022 — May 2026

- Executed end-to-end manual and regression testing across enterprise client deployments, **catching critical bugs before they reached production**.
- Performed API testing and network analysis using Postman and DevTools to identify faulty endpoints and integration issues.
- Prioritized bugs by severity and business impact, reducing resolution time for enterprise clients.
- Collaborated with PMs and developers from requirements to release, flagging ambiguities before development started.
- Performed exploratory testing across complex user flows, identifying edge cases not covered by formal test cases.

★ Featured Case — Penske Truck Leasing

Discovered a critical bug in Penske Truck Leasing's reservation flow — the **core revenue feature**. Analyzed network requests, identified a faulty API endpoint, and escalated with full business impact context. Resolved within hours, restoring the primary rental flow for an enterprise client.
